Your responsibilities:

- As part of our agile team you propose and implement ideas and solutions aimed at improving the software quality as well as software architecture of the components and products
- Hands-on development of our product Orchestra in all phases (specification, design, coding, testing, bug fixing and documentation)
- Object-oriented software development with Java over the entire software lifecycle
- Strong cooperation with other teams in our multinational organization

Your knowledge and education:

- Bachelor's or Master's degree in Computer Science, Information Systems, or equivalent experience
- Excellent knowledge in Java
- Proven hands on experience with objected-oriented software design and service-oriented architecture
- Experience with common technologies like UML, databases, SQL, XML, XPath, XSLT, SOAP & Rest
- Solid experience with programming in .net
- Convince with reliable and systematically work
- Team player with the ability to work in an international environment as well as working individually
- Excellent written and verbal communication skills; mastery in English and local language

What the soffico world offers you:

- Our world is based on appreciation, sustainability and job satisfaction
- A transparent and trusting work environment with flat hierarchies
- An attractive and competitive salary and financial benefits
- Continuous and targeted training in methodological competence, technology and soft skills
